English for Vocational Schools

Book 1

Introduction

Aim:

The general aim of this course is to develop learners' language skills, listening, speaking, reading and writing to supplement what they have learnt in the previous years but with more specification in conformity with other subject matters in the curriculum, and to be able to use the English language communicatively in the future.

Objectives:

By the end of the three-book series, learners are supposed to:

1. Develop knowledge of the basic elements of the English language: vocabulary, pronunciation and grammar,
2. Develop understanding of oral and written language skills.
3. Be aware of the ESP vocabulary and expressions relevant to their study.
4. Develop aesthetic and cultural creative sense in order to appreciate ESP topics and literature,
5. Participate in everyday-life communicative dialogues, discussions and interactions,
6. Understand instructions, read manuals, booklets and magazines.
7. Develop receptive skills, i.e. listening and reading, by practicing certain activities in this respect,
8. Promote productive skills, i.e. speaking and writing, by fulfilling meaningful and authentic activities,
9. Be capable of using ESP in their future career,
10. Practicing language learning skills such as speed reading skills, i.e. Scanning, guessing, etc.

11. Practice language learning autonomy strategies such as note-taking, summarizing, etc.,
12. Become active participants and language users, and
13. Involve in co-operative learning.

Syllabus Design

Each book of the series has the following activity format: vocabulary, speaking, reading, pronunciation, grammar and writing. This is to ensure its communicative purposes within the activity sequence and to motivate learners to participate effectively. Listening is achieved indirectly by exposing learners to the model, i.e. the teacher.

Features of the Book

- **Vocabulary** is introduced at the beginning of each unit in the form of activities so as to make them familiar to students when they appear again in the reading text. Teachers are supposed to encourage students to work out the activities as a warm up.

- **Speaking** is presented to provide students with an opportunity to express themselves and actually use English in the form of activities and dialogues which will equip students with the basic expressions needed to cope with everyday conversations in English concerning their field of study and future career. This activity will give them both practice and confidence in using what they learn.

- **Reading Comprehension:** There is one main reading text preceded by lead in questions and activities to give students reason to read and to predict what they will read

About in the text. At the same time, it is a kind of brainstorming to what they already know about the world (prior knowledge) or about English. The reading texts are supplemented with various activities to help students discover and learn new vocabulary, expressions and materials in more than one method. The reading texts are interesting, stimulating, and including examples of the main structure items of the unit.

- **Pronunciation** is intended to provide practice in English pronunciation with sufficient illustrations. The presentation of the English sound system needs to be enriched by other examples and/or activities on the part of the teacher and the learners as well.

- **Grammar:** The main grammatical points are almost given according to their occurrence in the reading passages. It contains activities which promote practicing the main structure item. It is also reviewed in the **Revision** units for reinforcement and to ease in using them again.

- **Writing** is promoted by exposing learners to activities that include practicing certain writing skills and subskills. Sometimes if the activities are new, instructions are presented to the learners where they are required to follow them step- by- step.

Reading

1.8 Nutrition

A human being is like a motorcar. In order to move, the motorcar needs fuel, so the human being needs food as fuel too. This operation is called nutrition. Nutrition can be defined as the science that explains the relationship between food and the function of living creatures.

Good nutrition demands variety of food sources, either animal or vegetable. So, more variety means more healthy food to achieve its functions; building the body, supplying it with energy, achieving its living activities, and protecting it against diseases.

Food can be divided according to its functions into three kinds:

1. Foods that build the body. They are also divided into two parts:

a- Animal foods which include meat, milk and its products, eggs, and fish,

b- Vegetable foods which include beans, soya beans, seeds, and nuts.

2-Foods that provide the body with energy: these include grain, fat, sugar, honey .3 and potatoes.

3. Body Protection Foods which include vitamins and minerals which are mainly found in vegetables and fruits.

Good food must have certain characteristics such as cleanliness, variety, ripeness and enough quantity. A perfect meal must contain the following food elements:

(1. Carbohydrates 2. Proteins 3. Fats 4. Vitamins 5. Minerals 6. Water)

Increasing or decreasing food quantity may cause many diseases. We must avoid gluttony because it causes fatness and flaccidity. We must also avoid starveling (lack of food quantity) because of malnutrition and this will cause nyctalopia (night blindness) and anemia.

Good nutrition features are: body's weight that suits its height and age, strong muscles and bones, soft and smooth skin and hair, and good appetite and digestion. So, it is important to take care of our food for the sake of maintaining good health.

1.9 Complete the following with words selected from the reading text.

1. Starveling may cause
2. Food functions are,.....and.....
3. Increasing or decreasing food quantities may cause many
4. Foods that build the body are,,and.....
5. Nyctalopia is a disease which means

1.10 State whether the following statements are true or false.

1. A human being does not need food as fuel.
2. Foods that provide the body with energy include sugar, fruits and fat.
3. Gluttony does not cause fatness and flaccidity.
4. Good nutrition demands variety of food sources.
5. Foods which include vitamins and minerals are body protection foods.

Pronunciation

1.11 How to pronounce the final (s) or (es):

1. It is pronounced /s/ after: /f/, /k/, /p/, /t/, /θ/.

2. It is pronounced /z/ after: /b/, /d/, /g/, /l/, /m/, /n/, /ŋ/, /r/, /v/, /j/ or with the vowel sounds, /a/, /e/, /i/, /o/, /u/.

3. It is pronounced /ɪz/ after: /s/, /z/, /ʃ/, /ʒ/, /tʃ/, /dʒ/.

1.12 Pronounce the final –s in the following words.

{tomatoes days boxes bridges spans writes beliefs hats}

1.13 Simple Present Tense

Read the following examples:

1. We wash our faces after we wake up.
2. They play football during holidays.
3. Teachers correct students' mistakes.
4. I water these flowers regularly.

We use the simple present tense to:

- talk about things in general,
- say that something happens all the time or repeatedly,
- say that something is true in general.

Note: After the third person singular, (he, she, it, your father, etc), the verb ends with (s) or (es):

1. He needs more money to buy those cows.

2.5 The Environment

Recycle

Keep your town clean

In general, environment means the conditions where someone is surrounded. This could be the climate, soil or living and non-living things such as humans, animals, plants, trees, mountains, lakes, seas, oceans, etc. There is an important interaction among the elements of the environment. Man depends on animals and plants for food, shelter, etc., while animals depend on other animals and plants for food and protection. Oceans, seas, rivers and lakes provide water for drinking, travelling, swimming and so on.

In fact, our planet is in trouble! Almost every day we hear of a problem affecting the environment; pollution, climate change, the destruction of rainforests, the decline and extinction of thousands of species of animals and plants, poverty....etc.

Nowadays, most of us know that these threats exist and that humans have caused them. Many of us are very worried about the future of our planet, but we certainly mustn't despair. Every one of us can do something to help slow down the damage. We all have a responsibility for our environment. We must learn how to use our natural resources (air, freshwater, forests, wildlife, farmland and seas) without damaging them.

As populations expand and lifestyles change, we must keep the world in a good condition so that future generations will have the same natural resources that we have.

2.6 Complete the following sentences, using the given words.

(surrounds threat interact declined natural)

1. We sent him an invitation, but he

2. The atmosphere the earth.

3.4 Electricity

Circuits

An electric circuit is the complete path of an electric current. The simplest electric circuit is made up of two components, or parts. The first component is an energy source, such as a battery or a generator. The second component is a wire or cable that carries energy from one end of the source. Then it is connected back to connects back to the source at the other end.

Usually a simple circuit has an energy recipient, such as a motor or lamp. An energy recipient is connected to the electric circuit by a wire or cable.

There are two basic types of electric circuits: series circuits and parallel circuits.

A. Series Circuits

Series circuits are easy to understand if you think about certain strands of light bulbs linked to each other. All the lights don't work when one bulb goes out. Why does this happen? This is because in a series circuit the energy has to go through one energy recipient to get to the next. If a bulb blows out, the energy stops at that bulb. It never makes it to the next bulb.

The amount of current is the same through any component in the circuit. This is because there is only one path for electrons to flow in a series circuit.

B. Parallel Circuit

In a parallel circuit, energy passes through the energy recipients and through a second connection. As long as there's an energy source, electricity will always be able to reach each recipient. If there is a problem with one recipient, the other recipients are not affected.

The voltage is equal across all components in the circuit. This is because there are only two sets of electrically common points in a parallel circuit.

In practice, most electrical devices have combination circuits. Combination circuits do not use just one type of circuits. Instead, combination circuits utilize both series and parallel types. Devices that use combination circuits include computers and television sets.

More complex circuits often have more electrical components like switches and resistors, which limit the electric current flow.

Basic definitions:

1. The current is a flow of electricity through a wire.
2. The generator is a machine that produces electricity.
4. Voltage is the force that makes electricity move through a wire.
5. Power is what voltage and current give together.
6. Energy is to multiply the power per second by the total number of seconds.

3.5 Do the following exercises.

1. According to this passage, what is the second component of a circuit?
a. electric current b. energy source c. energy recipient d. wire or cable

2. What would happen if one light went out in a parallel circuit?
a. All of the lights would go out.
b. All the lights except for that one would stay lit.
c. The energy source would stop working.
d. The circuit would become a simple circuit.

3. Read these sentences:
'Combination circuits utilize both series and parallel types.'
The word *utilize* means:
a. to make use of b. to provide energy for c. to create d. to burn out

4. How is energy passed in a parallel circuit?

3.6 Derive nouns from the following verbs:

{generate, connect, combine, flow, measure}

Pronunciation

3.7 Some English sounds are called consonants, others are called vowels. English has 24 consonants; nine of them are voiceless and fifteen are voiced. Voiced consonants are produced with some vibration in the vocal cords.

3.9 Simple Future Tense

Study the following examples:

1. Wait, I shall help you.
2. He will probably come back tomorrow.
3. The gardener will not cut the grass until Friday.
4. If I arrive late, I shall call you.
5. Maybe she will do a language course.
6. I'll send you the information when I get it.
7. Don't worry, I'll be careful.
8. He is going to spend his vacation in the north.
9. Sue is going to make John's birthday cake.
10. The year 2222 will be a very interesting year.

The simple future tense has two different forms in English: "*will, shall*" and "*be going to*". Both refer to a specific time in the future.

Shall and Will

'Will' is used with all persons, but 'shall' can be used as an alternative with 'I' and 'we' in pure future reference.

'Shall' is usually avoided with 'you' and 'I':

- You and I will work in the same office.

How do we make the simple future tense?

The structure of the simple future tense is:

subject	+	will	+	main verb
---------	---	------	---	-----------

For negative sentences, we insert 'not' between the auxiliary verb and the main verb.

For question sentences, we exchange the subject and auxiliary verb.

Look at these examples sentences:

	subject	auxiliary verb		main verb	
+	I	will		Open	the door.
+	You	will		finish	before me.
-	She	will	not	Be	at school tomorrow.
-	We	will	not	Leave	The office .
?	Will	you		arrive	on time?
?	Will	they		Want	dinner?

When we use the simple future tense in speaking, we often contract the

subject and auxiliary verb:

I will	I'll
you will	you'll
he will she will it will	he'll she'll it'll
we will	we'll
they will	they'll

For negative sentences in the simple future tense, we contract with '*won't*', like this:

I will not	I won't
------------	---------

you will not	you won't
he will not she will not it will not	he won't she won't it won't
we will not	we won't
they will not	they won't

How do we use Simple Future Tense?

1. No Plan

We use the simple future tense when there is no plan or decision to do something before we speak. We make the decision spontaneously at the time of speaking. Look at these examples:

- Hold on. I'll get a pen.
- We will see what we can do to help you.
- Maybe we'll stay in and watch television tonight.

In these examples, we had no firm plan before speaking. The decision is made at the time of speaking.

We often use the simple future tense with the verb *'think'*:

- I think I'll go to the gym tomorrow.
- I think I will have a holiday next year.
- I don't think I'll buy that car.

2. Prediction

We often use the simple future tense to make a prediction about the future. Again, there is no firm plan. We are saying what we think will happen. Here are some examples:

- It will rain tomorrow.
- People won't go to Jupiter before the 22nd century.
- Who do you think will get the job?

3. Be

When the main verb is '*be*', we can use the simple future tense even if we have a firm plan or decision before speaking. Examples:

- I'll be in London tomorrow.
- I'm going shopping. I won't be very long.
- Will you be at work tomorrow?

3.10 Fill in the blanks with the suitable form of the verb between brackets.

1. Father ----- back by 6:30 pm. (*be*)

2. ----- you ----- me? (*help*)
3. When ----- I ----- you again? (*see*)
4. His parents ----- him for being late. (*not/ punish*)
5. ----- they ----- the contract tonight? (*sign*)
6. It ----- us three hours to get there. (*take*)
7. ----- this show ----- money for our school club? (*raise*)
8. This van ----- with 8 people in it. (*not/ break down*)
9. The meeting ----- before tomorrow morning. (*not/ close*)
10. When ----- she ----- me a copy of her essay? (*send*)

Be + going to

Be + going to is another form to express the future. We mainly use it to talk about **planned actions** or to **make predictions**.

Form:

Subject	+	Auxiliary verb	+	Auxiliary verb	+	Main verb
---------	---	----------------	---	----------------	---	-----------

I/a boy, etc.	is/are	going to	go/take, etc.
------------------	--------	----------	------------------

1. This team **is** definitely **going to** win the competition.
2. I'm **going to** visit my grandma next week.
3. She **is going to** give birth in a couple of weeks.

Negation:

4.4 Computers

A computer is an electronic machine which stores and processes information. It has two basic components; hardware and software. The hardware refers to the actual machinery such as the CPU, inputs, outputs and memory, whereas the software refers to programmes, data, etc. The central processing unit (CPU) contains a hard disc for storage of programmes and data. It has a built-in floppy drive, a modem and a compact disc (CD) driver.

Inputs and outputs are the means by which a computer receives information from the outside world and sends results back. The keyboard is an input device for giving instructions, while the monitor is an output device for viewing the results of computations. The other parts that can be added to the computer are: speakers, microphones, printers, scanners, digital cameras and mice, which are called 'add-ons'.

A programme is a list of instructions that are stored and executed by the computer. Programming, on the other hand, means writing of a computer programme. The person who programmes a computer is called a programmer.

4.5 Correct the wrong information in each of the following statements.

1. The software includes the CPU and the memory of the computer.
2. The data is part of the hardware of the computer.
3. The computer receives outputs and sends inputs.
4. Add-ons include a modem and a CD driver.
5. A programmer is the person who drives a CD.
